

# Command List

## VISCA<sup>1)</sup> RS-232C Commands

Use of RS-232C control software which has been developed based upon this command list may cause malfunction or damage to hardware and software. Sony Corporation is not liable for any such damage.

### Overview of VISCA

In VISCA, the side outputting commands, for example, a computer, is called the controller, while the side receiving the commands, such as an EVI-HD1, is called the peripheral device. The EVI-HD1 serves as a peripheral device in VISCA. In VISCA, up to seven peripheral devices like the EVI-HD1 can be connected to one controller using communication conforming to the RS-232C standard. The parameters of RS-232C are as follows.

- Communication speed: 9600 bps/38400 bps
- Data bits : 8
- Start bit : 1
- Stop bit : 1
- Non parity

Flow control using XON/XOFF and RTS/CTS, etc., is not supported.

Peripheral devices are connected in a daisy chain. As shown in Fig. 1, the actual internal connection is a one-direction ring, so that messages return to the controller via the peripheral devices. The devices on the network are assigned addresses.

The address of the controller is fixed at 0. The addresses of the peripheral devices are 1, 2, 3 ... in order, starting from the one nearest the controller. The address of the peripheral device is set by sending address commands during the initialization of the network.

The VISCA devices each have a VISCA IN and VISCA OUT connector.

Set the DTR input (the S output of the controller) of VISCA IN to H when controlling VISCA equipment from the controller.

Fig. 1 VISCA network configuration

1) VISCA is a protocol which controls consumer camcorders developed by Sony. "VISCA" is a trademark of Sony Corporation.

# VISCA Communication Specifications

## VISCA packet structure

The basic unit of VISCA communication is called a packet (Fig. 2). The first byte of the packet is called the header and comprises the sender's and receiver's addresses. For example, the header of the packet sent to the EVI-HD1 assigned address 1 from the controller (address 0) is hexadecimal 81H. The packet sent to the

EVI-HD1 assigned address 2 is 82H. In the command list, as the header is 8X, input the address of the EVI-HD1 at X. The header of the reply packet from the EVI-HD1 assigned address 1 is 90H. The packet from the EVI-HD1 assigned address 2 is A0H.

Some of the commands for setting EVI-HD1 units can be sent to all devices at one time (broadcast). In the case of broadcast, the header should be hexadecimal 88H.

When the terminator is FFH, it signifies the end of the packet.

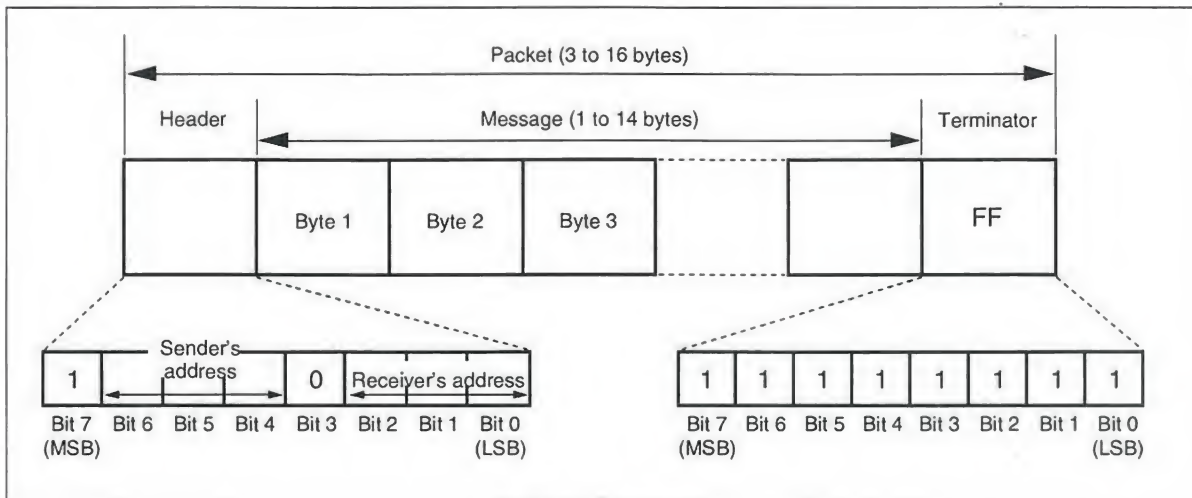

Fig. 2 Packet structure

### Note

Fig. 2 shows the packet structure, while Fig. 3 shows the actual waveform. Data flow will take place with the LSB first.

Fig. 3 Actual waveform for 1 byte.

## Timing Chart

As VISCA Command processing can only be carried out one time in a Vertical cycle, it takes the maximum 1V cycle time for an ACK/Completion to be returned. If the Command ACK/Completion communication time can be cut shorter than the 1V cycle time, then every 1V cycle can receive a Command.

From this point, if 2 or more commands in a row are to be sent, wait for the first command (for normal commands, an ACK or an error message, for query commands, an Inquiry Packet) to be carried out before sending the next one.

### General Commands

### Query Commands

## Command and inquiry

### ● Command

Sends operational commands to the EVI-HD1.

### ● Inquiry

Used for inquiring about the current state of the EVI-HD1.

	Command Packet	Note
Inquiry	8X QQ RR ... FF	QQ <sup>1)</sup> = Command/Inquiry, RR <sup>2)</sup> = category code

<sup>1)</sup> QQ = 01 (Command), 09 (Inquiry)

<sup>2)</sup> RR = 00 (Interface), 04 (camera 1), 06 (Pan/Tilter)

X = 1 to 7: EVI-HD1 address

## Responses for commands and inquiries

### ● ACK message

Returned by the EVI-HD1 when it receives a command. No ACK message is returned for inquiries.

### ● Completion message

Returned by the EVI-HD1 when execution of commands or inquiries is completed. In the case of inquiry commands, it will contain reply data for the inquiry after the 3rd byte of the packet. If the ACK message is omitted, the socket number will contain a 0.

	Reply Packet	Note
Ack	X0 4Y FF	Y = socket number
Completion (commands)	X0 5Y FF	Y = socket number
Completion (Inquiries)	X0 5Y ... FF	Y = socket number

X = 9 to F: EVI-HD1 address + 8

### ● Error message

When a command or inquiry command could not be executed or failed, an error message is returned instead of the completion message.

Error Packet	Description
X0 6Y 02 FF	Syntax Error
X0 6Y 03 FF	Command buffer full
X0 6Y 04 FF	Command cancelled
X0 6Y 05 FF	No socket (to be cancelled)
X0 6Y 41 FF	Command not executable

X = 9 to F: EVI-HD1 address + 8, Y = socket number

## Socket number

When command messages are sent to the EVI-HD1, it is normal to send the next command message after waiting for the completion message or error message to return. However to deal with advanced uses, the EVI-HD1 has two buffers (memories) for commands, so that up to two commands including the commands currently being executed can be received. When the EVI-HD1 receives commands, it notifies the sender which command buffer was used using the socket number of the ACK message.

As the completion message or error message also has a socket number, it indicates which command has ended. Even when two command buffers are being used at any one time, an EVI-HD1 management command and some inquiry messages can be executed.

The ACK message is not returned for these commands and inquiries, and only the completion message of socket number 0 is returned.

## Command execution cancel

To cancel a command which has already been sent, send the Cancel command as the next command. To cancel one of any two commands which have been sent, use the cancel message.

	Cancel Packet	Note
Cancel	8X 2Y FF	Y = socket number

X = 1 to 7: EVI-HD1 address, Y = socket number

The Command canceled error message will be returned for this command, but this is not a fault. It indicates that the command has been canceled.

## VISCA Device Setting Command

Before starting control of the EVI-HD1, be sure to send the Address command and the IF\_Clear command using the broadcast function.

---

### For VISCA network administration

#### ● Address

Sets an address of a peripheral device. Use when initializing the network, and receiving the following network change message.

#### ● Network Change

Sent from the peripheral device to the controller when a device is removed from or added to the network. The address must be re-set when this message is received.

	Packet	Note
Address	88 30 01 FF	Always broadcasted.
Network Change	X0 38 FF	
X = 9 to F: EVI-HD1 address + 8		

---

### VISCA interface command

#### ● IF\_Clear

Clears the command buffers in the EVI-HD1 and cancels the command currently being executed.

	Command Packet	Reply Packet	Note
IF_Clear	8X 01 00 01 FF	X0 50 FF	
IF_Clear (broadcast)	88 01 00 01 FF	88 01 00 01 FF	
X = 1 to 7: EVI-HD1 address (For inquiry packet)			
X = 9 to F: EVI-HD1 address +8 (For reply packet)			

---

### VISCA interface and inquiry

#### ● CAM\_VersionInq

Returns information on the VISCA interface.

Inquiry	Inquiry Packet	Reply Packet	Description
CAM_VersionInq	8X 09 00 02 FF	Y0 50 GG GG HH HH JJ JJ KK FF	GGGG = Vender ID (0020: Sony) HHHH = Model ID 0504: EVI-HD1 JJJJ = ROM revision KK = Maximum socket # (02)

X = 1 to 7: EVI-HD1 address (For inquiry packet)

X = 9 to F: EVI-HD1 address +8 (For reply packet)

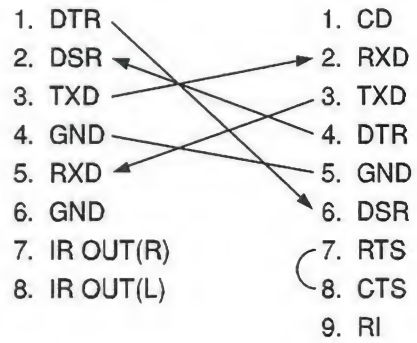

## Pin assignment

No	Pins
1	DTR IN
2	DSR IN
3	TXD IN
4	GND
5	RXD IN
6	GND
7	IR OUT (R)*
8	IR OUT (L)*

\* You can change ON/OFF of IR OUT of pins 7 and 8 using the BOTTOM switch (see page 6).

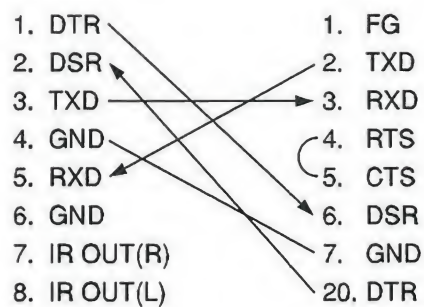

### • EVI-HD1 Windows D-sub 9 pin

### • EVI-HD1 EVI Camera or Mini DIN 8 pin serial

### • EVI-HD1 Windows D-sub 25 pin

## VISCA Command/ACK Protocol

Command	Command Message	Reply Message	Comments
General Command	81 01 04 38 02 FF (Example)	90 41 FF (ACK)+90 51 FF (Completion) 90 42 FF 90 52 FF	Returns ACK when a command has been accepted, and Completion when a command has been executed.
	81 01 04 38 FF (Example)	90 60 02 FF (Syntax Error)	Accepted a command which is not supported or a command lacking parameters.
	81 01 04 38 02 FF (Example)	90 60 03 FF (Command Buffer Full)	There are two commands currently being executed, and the command could not be accepted.
	81 01 04 08 02 FF (Example)	90 61 41 FF (Command Not Executable) 90 62 41 FF	Could not execute the command in the current mode.
Inquiry Command	81 09 04 38 FF (Example)	90 50 02 FF (Completion)	ACK is not returned for the inquiry command.
	81 09 05 38 FF (Example)	90 60 02 FF (Syntax Error)	Accepted an incompatible command.
Address Set	88 30 01 FF	88 30 02 FF	Returned the device address to +1.
IF_Clear(Broadcast)	88 01 00 01 FF	88 01 00 01 FF	Returned the same command.
IF_Clear (For x)	8x 01 00 01 FF	z0 50 FF (Completion)	ACK is not returned for this command.
Command Cancel	8x 2y FF	z0 6y 04 FF (Command Canceled)	Returned when the command of the socket specified is canceled. Completion for the command canceled is not returned.
		z0 6y 05 FF (No Socket)	Returned when the command of the specified socket has already been completed or when the socket number specified is wrong.

## VISCA Camera-Issued Messages

### ACK/Completion Messages

	Command Messages	Comments
ACK	z0 4y FF (y:Socket No.)	Returned when the command is accepted.
Completion	z0 5y FF (y:Socket No.)	Returned when the command has been executed.

z = Device address + 8

### Error Messages

	Command Messages	Comments
Syntax Error	z0 60 02 FF	Returned when the command format is different or when a command with illegal command parameters is accepted.
Command Buffer Full	z0 60 03 FF	Indicates that two sockets are already being used (executing two commands) and the command could not be accepted when received.
Command Canceled	z0 6y 04 FF (y:Socket No.)	Returned when a command which is being executed in a socket specified by the cancel command is canceled. The completion message for the command is not returned.
No Socket	z0 6y 05 FF (y:Socket No.)	Returned when no command is executed in a socket specified by the cancel command, or when an invalid socket number is specified.
Command Not Executable	z0 6y 41 FF (y:Execution command Socket No. Inquiry command:0)	Returned when a command cannot be executed due to current conditions. For example, when commands controlling the focus manually are received during auto focus.

### Network Change Message

	Command Message	Comments
Network Change	z0 38 FF	Issued when power is being routed to the camera, or when the VISCA device is connected to or disconnected from the VISCA RS-232C OUT connector used for communication.

# EVI-HD1 Commands

## EVI-HD1 Command List (1/3)

Command Set	Command	Command Packet	Comments
AddressSet	Broadcast	88 30 01 FF	Address setting
IF_Clear	Broadcast	88 01 00 01 FF	I/F Clear
CommandCancel		8x 2p FF	p: Socket No.(=1or2)

Zoom Ratio and Zoom Position  
(for reference)

Zoom Ratio	Optical Zoom Position Data	D-Zoom Ratio
×1	0000	
×1.2	0800	
1.5	1000	
×1.9	1800	
×2.5	2000	
×3.4	2800	
×4.8	3000	
×6.8	3800	
×10.1	4000	
	4000	×1
	5bc0	×1.5
	69c0	×2
	7e80	×4

## Focus and Focus Distance (for reference)

Focus Position	1000: Over Inf to 7600: 0.10 m	
	Far end	Near end
Focus Near Limit	2000: 2.99 m	As the distance on the left will differ due to temperature characteristics, etc., use as approximate values. *The lower 1 byte is fixed at 00.
	3000: 1.29 m	
	4000: 0.75 m	
	5000: 0.47 m	
	6000: 0.24 m	
	7000: 0.19 m	
	7600: 0.10 m	

## Others

R,B gain	00~FF
Aperture	00~0F

## Pan/Tilt Status Code List

P	Q	R	S	
----	----	0---	---1	A Pan movement all the way to the left
----	----	0---	--1-	A Pan movement all the way to the right
----	----	0---	-1--	A Tilt movement all the way up
----	----	0---	1---	A Tilt movement all the way down
----	----	--00	----	Pan movement is correct
----	----	--01	----	Pan position cannot be detected
----	----	--10	----	The Pan mechanism is abnormal
----	--00	0---	----	The Tilt movement is correct
----	--01	0---	----	The Tilt position cannot be detected
----	--10	0---	----	The Tilt mechanism is abnormal
----	00--	0---	----	No movement instructions
----	01--	0---	----	In the midst of a Pan/Tilt
----	10--	0---	----	Pan/Tilt completed
----	11--	0---	----	Pan/Tilt failed
--00	----	0---	----	Not initialized
--01	----	0---	----	Initializing
--10	----	0---	----	Initialization completed
--11	----	0---	----	Initialization failed

( -: optional)

## Pan/Tilt Position (for reference)

	Parameter (position)
PAN	FA60 (-100 degree) to 05A0 (+100 degree)
TILT	FE98 (-25 degree) to 0168 (+25 degree)

## LED Status

Status		POWER (Green)	STANDBY (Orange)
Main power ON	Power On (including initializing period)	On	Off
	When receiving infrared signals form Remote Commander	Blinking	Off
	At position detection error	On	Blinking
	Sandby status Power off by VISCA or the Remote Commander	Off	On
Main power Off		Off	Off
Initialization error	Pan/tilt error	Blinking	Blinking
	Internal error(LSI, etc.)	Blinking alternately	
BOTTON switch and SYSTEM SELECT switch	Setting error	On	On
